PROJECTS

Parcel Transportation Management System(PTMS)

This Application manages the orders to be successfully assigned to the available carrier services of different types. Create shipments for those orders. Track all those orders related to different carriers services. Estimates whether the order can be delivered in the requested date.

WMS & IRIS Application

It is an e-commerce application which manages the orders received to the DC's. It fulfills the requirements of the order from picking the items in the dc's to ship the order. Manages items in distribution center so the users can place orders in portal.
